

mfg-article class

2024/08/13

Yuta Teshima

1 What is this?

This package provides a LuaLaTeX class file for Manufacturing Lab document based on `jlreq` class.

See `README.pdf` for an example output.

2 Installation

Move the folders as follows

- `./fonts/truetype/public/ -> $TEXMF/fonts/truetype/public/`
- `./tex/latex/mfg-article/ -> $TEXMF/tex/latex/mfg-article/`

3 Usage

Set the documentclass to `mfg-article` like the example below.

This package provides the `migu` option in addition to the class options supported by the `jlreq` class. Setting this option sets the monospace font to Migu 1M.

```
\documentclass[migu]{mfg-article}
```

4 Font Licenses

This package uses `migu-1m-regular` and `migu-1m-bold` as monospaced fonts. These fonts are distributed under the IPA Font License Agreement v1.0.

This package uses `GenJyuuGothic` at titles, section titles, and headers. This font is distributed under the SIL Open Font License 1.1

5 License

This package is distributed under the MIT License.

6 Challenge log

- 2024/08/13 The title has been updated and the kitten now stretches after knocking over a book.
